

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

CONTENTS

FRIDAY, DECEMBER 25, 1914

National Academies and the Progress of Research: DR. GEORGE ELLERY HALE 907

University Registration Statistics: JOHN C. BURG 919

Charles Sedgwick Minot: PROFESSOR HENRY H. DONALDSON 926

The Samuel Franklin Emmons Memorial Fellowship 927

The San Francisco Meeting of the American Association for the Advancement of Science 928

Scientific Notes and News 929

University and Educational News 932

Discussion and Correspondence:—

Rate of Continental Denudation: DR. CHARLES KEYES. *Cladonema:* E. CARROLL FAUST 933

Scientific Books:—

Grove on The British Rust Fungi: PROFESSOR J. C. ARTHUR. *Stanley's Text-book on Wireless Telegraphy:* J. H. M. 934

Botanical Notes:—

Tropical Leaves; North American Flora; Perennial Grass Stems; Some Temperature Relations of Plants; Short Notes: PROFESSOR CHARLES E. BESSEY 937

Special Articles:—

Hadropterus peltatus in the Delaware: HENRY W. FOWLER 939

The Convocation Week Meeting of Scientific Societies 940

NATIONAL ACADEMIES AND THE PROGRESS OF RESEARCH

III. THE FUTURE OF THE NATIONAL ACADEMY OF SCIENCES¹

In previous papers of this series² we have traced the development of European academies and observed the powerful influence they have exercised on the advancement of research; we have watched the beginnings of scientific investigation in the United States, and their public recognition by act of Congress establishing the National Academy of Sciences; and we have followed the history of the Academy during the half century which has elapsed since its origin. In view of the great part which academies have played in the past, and the fact that the rapid development of original research in this country has carried us out of the pioneer period, the National Academy now faces an exceptional opportunity to impress its influence upon the future scientific work of the United States. But if it enjoys an opportunity, it also faces a duty, imposed upon it by its national charter and by its position as the sole representative of

¹ This paper was presented at the Baltimore meeting of the National Academy in November, 1913. By action of the council, a manuscript copy was subsequently sent by the home secretary to each member of the academy for criticism and comment. In preparing the paper for publication, the author has had the advantage of seeing these replies. Except for a few minor verbal changes, the text is printed in its original form, with the addition of new paragraphs in square brackets.
